

ABSTRACT

A drug abuse test kit has a transparent cup-like container for retaining a fluid sample to be tested and the open top end of the container is closed by a closure cap seated upon the open end. There is a slit in the closure cap to receive a multiple drug test card having a plurality of immunoassay test strips thereon with visual endpoints to indicate presence or absence of a particular drug. The container is provided with a second cover which is solid and unslit to close and seal the container when a sample therein is to be transported.
